2 The grading system

The grading system included in the Evaluation Grid template (Annex I) provides a quick overview of the main conclusions at the level of each assessment question. A five-grade scale is adopted using the following categories (Table 1):

Table 1. Grading reference table.

Score	Grading reference table for assessing and monitoring questions
	I disagree = 1: There are deficiencies which are serious. If not addressed, they may lead to failure of the Deliverable. Major adjustments and revision of the intervention logic and/or implementation arrangements are necessary.
	I slightly disagree = 2: There are issues which need to be addressed. Necessary improvements do not, however, require a major revision of the intervention logic and implementation arrangements.
	Neutral = 3: The situation is considered satisfactory, but there may be room for improvement. Recommendations are useful, but not vital to the project or programme.
	I agree = 4: All issues within the scope of the project have been fairly addressed. Authors have answered any requirement stated in the Task description, reaching the intended objectives. There is no request for further improvements gathered in the evaluation process.
	I completely agree = 5: The Deliverable quality goes beyond the expected quality standards reported in the Quality assurance procedure, leading to an outstanding standard. Authors did not confine the activity implementation to the proposal description, but they have contingently approached the task by considering any additional information arising during the project development. The delivery deadline has been met.
